

# Installation, Operation, and Maintenance Instructions Electric Range

## Models:

R30S

RI30S, RI30C (Induction Range Top)

# Safety

THE GRIDDLE IS EXTREMELY HEAVY. FOR SAFE HANDLING, INSTALLER SHOULD OBTAIN HELP AS NEEDED, OR EMPLOY APPROPRIATE MATERIALS HANDLING EQUIPMENT (SUCH AS A FORKLIFT, DOLLY, OR PALLET JACK) TO REMOVE THE UNIT FROM THE SKID AND MOVE IT TO THE PLACE OF INSTALLATION.

## CAUTION

ANY STAND, COUNTER OR OTHER DEVICE ON WHICH GRIDDLE WILL BE LOCATED MUST BE DESIGNED TO SUPPORT THE WEIGHT OF THE GRIDDLE.

SHIPPING STRAPS ARE UNDER TENSION AND CAN SNAP BACK WHEN CUT.

## DANGER:

THIS APPLIANCE MUST BE GROUNDED AT THE TERMINAL PROVIDED. FAILURE TO GROUND THE APPLIANCE COULD RESULT IN ELECTROCUTION AND DEATH.

## WARNING

INSTALLATION OF THE UNIT MUST BE DONE BY PERSONNEL QUALIFIED TO WORK WITH ELECTRICITY. IMPROPER INSTALLATION CAN CAUSE INJURY TO PERSONNEL AND/OR DAMAGE TO EQUIPMENT. UNIT MUST BE INSTALLED IN ACCORDANCE WITH ALL APPLICABLE CODES.

## NOTICE

The data plate is on top of the control box. The griddle voltage, wattage, serial number, wire size, and clearance specifications are on the data plate. This information should be carefully read and understood before proceeding with the installation.

## NOTICE

The installation of any components such as a vent hood, grease extractors, fire extinguisher systems, must conform to their applicable National, State and locally recognized installation standards.

## NOTICE

During the first few hours of operation, you may notice a small amount of smoke coming off the unit, and a faint odor from the smoke. This is normal for a new griddle and will disappear after the first few hours of use.

## CAUTION

ALWAYS KEEP THE AREA NEAR THE APPLIANCE FREE FROM COMBUSTIBLE MATERIALS.

## CAUTION

KEEP FLOOR IN FRONT OF EQUIPMENT CLEAN AND DRY. IF SPILLS OCCUR, CLEAN IMMEDIATELY, TO AVOID THE DANGER OF SLIPS OR FALLS.

**WARNING** KEEP WATER AND SOLUTIONS OUT OF CONTROLS. NEVER SPRAY OR HOSE CONTROL CONSOLE, ELECTRICAL CONNECTIONS, ETC.

**CAUTION** MOST CLEANERS ARE HARMFUL TO THE SKIN, EYES, MUCOUS MEMBRANES AND CLOTHING. WEAR RUBBER GLOVES, GOGGLES OR FACE SHIELD AND PROTECTIVE CLOTHING. CAREFULLY READ THE WARNING AND FOLLOW THE DIRECTIONS ON THE LABEL OF THE CLEANER TO BE USED.

**NOTICE** Service on this or any other Lang appliance must be performed by qualified personnel only. Consult your Lang Authorized Service Agent Directory. You can call our toll free number 314-678-6315 or visit our website [www.langworld.com](http://www.langworld.com) for the service agent nearest you.

**WARNING** BOTH HIGH AND LOW VOLTAGES ARE PRESENT INSIDE THIS APPLIANCE WHEN THE UNIT IS PLUGGED/WIRED INTO A LIVE RECEPTACLE. BEFORE REPLACING ANY PARTS, DISCONNECT THE UNIT FROM THE ELECTRIC POWER SUPPLY.

**CAUTION** USE OF ANY REPLACEMENT PARTS OTHER THAN THOSE SUPPLIED BY LANG OR THEIR AUTHORIZED DISTRIBUTORS CAN CAUSE BODILY INJURY TO THE OPERATOR AND DAMAGE TO THE EQUIPMENT AND WILL VOID ALL WARRANTIES.

# OPERATING INSTRUCTIONS

## RANGE TOPS

Electric range tops consist of various top arrangements, depending upon the specific models purchased.

- Options include
- 1.) 12" x24" hot plates
  - 2.) Round speed units
  - 3.) Griddles
  - 4.) Induction Burners

Three position switches, thermostats, or infinite controls independently control these units.

All thermostats are used in conjunction with a red indicator or pilot lamp. When the light is on the elements are energized and bringing the plate to the temperature set on the thermostat. When the light is off the plate has reached the temperature set on the thermostat. Griddle pilot lights should be allowed to cycle at least twice before usage.

Recommended Usage:

- 1.) 12" x 24" hot plates. - Heavy stockpots and kettles.
- 2.) French Plates- Light duty saucepans and small stockpots.  
(*NOT recommended for large stockpots.*)
- 3.) Griddles - Used for grilling product directly on surface.

### CAUTION

All hot plates and speed units should be turned to the low or off position when not in use. Allowing these elements to stay in the full on or high position with nothing on top to absorb and dissipate the heat is detrimental to element life. Lang warranty provisions do not cover abuse of this nature.

### INITIAL START-UP

#### Hot Plates

To "dry out" the hot plate, set the thermostat dial at 250°F and turn on the power switch. Allow unit to cycle at least 15 minutes at this heat level. Reset the thermostat to 350°F allowing the same time. Then reset the thermostat to 450°F allowing the same time. Continue doing this until you reach 850°F then allow the unit to maintain this temperature for a minimum of 4 hours.

More time may be required if the unit has to operate in a moist environment.

If the unit is out of use for three or more days, a one-hour preheat schedule should be used, especially when exposed to high humidity and/or cool temperatures.

#### French Plates

To "dry out" the French plate, set the six-heat switch to the first setting and turn on the power switch. Allow unit to cycle at least 15 minutes at this heat level. Reset the six-heat switch to position 2 and allow the same time. Reset the six-heat switch to position 3 and allow the same time. Continue doing this until you reach position 6 then allow the unit to maintain the temperature for a minimum of 4 hours. More time may be required if the unit has to operate in a moist environment.

If the unit is out of use for three or more days, a one-hour preheat schedule should be used, especially when exposed to high humidity and/or cool temperatures.

## Induction Burners

Induction requires cookware that is induction efficient or that is made for use on an induction surface. Generally speaking if a magnet attracts and strongly adheres to the pan bottom it will generally work on an induction surface. This is a requirement for proper use.

**DO NOT USE WITH EMPTY PANS.**

To operate unit turn the knob clockwise and a small digital number will appear next to the hotplate to be cooked on. The higher the number the faster the heat up. Heating will begin when the pan surface comes in contact with the induction surface and will cease when the pan is removed. **Note: surface will remain hot for a certain period of time after the pan is removed.**

Induction module, controlled by variable heat control. Great for rapid heat-up, it will generally boil water, heat sauces or soups in about half the time of a French Plate. Use caution placing items on the glass cook surface, always wipe down glass with mild soap and water to keep the unit clean.

## Griddles

To “dry out” the griddle, set the thermostat to 250°F and turn on the power switch. Allow the unit to cycle at least 15 minutes at this heat level. Reset the thermostat to 350°F allow the same time. Reset the thermostat to 450°F and allow the unit to maintain the temperature for a minimum of 4 hours. More time may be required if the unit has to operate in a moist environment.

If the unit is out of use for three or more days, a one-hour preheat schedule should be used, especially when exposed to high humidity and/or cool temperatures.

# OPERATING INSTRUCTIONS

## COMMERCIAL ELECTRIC RANGE

### General

The range is designed to give, well-regulated, uniform heat throughout the oven and over the surface units. The oven and surface units should be thoroughly preheated before being used. It is advantageous from an operating cost standpoint to operate with the switches and/or thermostats set at the lowest position that will satisfactorily perform the cooking being done.

### Initial Use

Before the initial use of the range, the oven must be thoroughly allowed to dry itself out. This is done by setting the top and bottom oven switches to the "low" position, and setting the thermostat to 350°F. Allow the range oven to saturate until all vapors and condensation have been eliminated. For best operating results allow the range oven to thoroughly dry out. Allow 8 to 12 hours for this process. Clean top plates thoroughly. Apply salad oil. Turn each plate switch or thermostat to a low position and allow plate to heat for three hours.

### Range Controls

Three heat switches or automatic thermostats control the top plate units. The range is provided with an upper heating unit located in the top of the oven and a lower heating unit located under the metal deck, in the bottom of the oven. Each heating unit is independently regulated for proper ratio of "top" and "bottom" heat, to suit the product being baked or roasted, by means of two 3-heat switches located in the panel at the right of the range. The range oven is also provided with an adjustable, automatic temperature control, the dial, which is located in the range switch panel. The setting of the control dial establishes the average temperature to be maintained in the range oven.

### Operation

The range oven must be thoroughly, preheated before satisfactory baking can be done. The range oven will not bake uniformly if not sufficiently preheated. To compensate for temperature drop when loading the range oven, set the thermostat up 50 degrees over the desired temperature. Reset thermostat after the range is loaded. The range oven may be preheated with the three (3) heat switches set at a lower position than "High", but the time required will be proportionally longer. After preheating, set both three (3) position heat switches for proper ratio of "top" and "bottom" heat to suit the product to be baked or roasted.

The 12" high "Roasting and Baking" range oven is equipped with a removable rack. For baking pies, bread, or for roasting operations, the rack may be placed directly on the metal deck and the pans placed on the rack. For baking cakes or pastries, the rack should be located in the lower position provided by the rack supports at the sides of the range and the pans placed on the rack in this lower position.

The following temperature, time, switch setting and rack positions are suggested as a guide in baking various classes of products:

General Class of Product	Average Range Temperature	Time (Min.)	With Metal Switch Settings		Rack Position
			Top	Bottom	
Pies	375°F -425°F	35-60	Low	Medium	Rack on Deck
Rolls	375°F -400°F	15-30	Low	High	Rack Support
Cake	350°F -400°F	20-45	Low	High	Rack Support
Pastries	325°F -375°F	8-20	Low	High	Rack Support
Bread	425°F -450°F	25-45	Low	Medium	Rack on Deck
Roast Beef	300°F -325°F		Low	High or Medium	Rack on Deck

Always place the pans symmetrically on the rack for best results. Keep the oven door closed as much as possible. Excessive door opening will cool the front section of the oven and products placed near the front are likely to bake slower. It is desirable to keep the front edge of the pans at least several inches back from the inside of the door (when closed). Do not permit air from a window or fan to blow into the oven; it will cause uneven heating.

### Range Top

Consists of the various top arrangements, depending on specific model purchased:

12" x 24" hot plate controlled by indicating type three (3) heat switch or high temperature thermostats. Temperature range 0-800°F (-18°C-427°C). Recommended: Stockpots and heavy kettle work.

Round Speed Units, controlled by indicating type 3-heat switch. Temperature range is 0-800°F (-18°C-427°C) Recommended: Light duty saucepans and small stockpots. Not Recommended: heavy stockpots, heavy urns, or kettles.

12" x 24" or 24" x 24" grill plates, controlled by thermostats. Temperature range is 0-450°F (-18°C -232°C). Recommended: All heavy and light frying. Set the thermostat dial at the desired temperature. The red pilot light will be on until the desired temperature is reached. The pilot light indicates when the plate is heating.

### Care and Cleaning

The range should be thoroughly cleaned at least once a week in addition to the normal daily cleaning to insure against the accumulation of foreign material. Keep inside of oven and metal deck clean, particularly around door opening, door edges and at bottom of door opening so that the door may close tightly. CAUTION: ANY OVEN CLEANER USED SHOULD BE MARKED: "SAFE ON ALUMINUM."

Keep-drip pans under range top plates clean.

Keep hotplate and griddle surfaces clean.

Outside of range and top should be kept clean.

Electric equipment is clean and sanitary, but may become unsanitary if dirt is allowed to accumulate on it. Take advantage of the clean, sanitary features of electric equipment, give it the regular attention that it deserves, the same as any other highly perfected machinery, to insure best results and continued high operating efficiency.

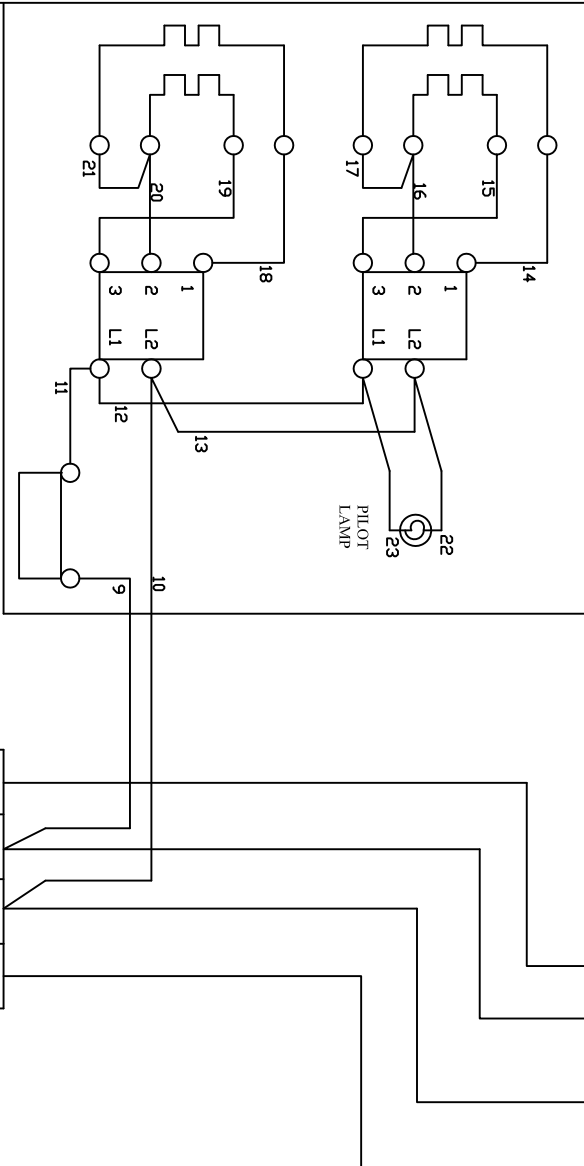

#### How to Order Parts

Be sure to give the SERIAL NUMBER of the range, when ordering parts. If a switch is required, state for what size plate of the top surface or state if it is for the oven. Give description of other parts.
