⚠ WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are marked by **⚠** in the Schematic Diagrams, Circuit Board Diagrams, Exploded Views and Replacement Parts List. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire or other hazards. Do not modify the original design without permission of manufacturer.

1 Safety Precautions

WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

WARNING

1. This product should be serviced only by trained qualified personnel.
2. Though this product has been manufactured in compliance with:
"Federal Performance Standard 21 CFR Subchapter J" (D.H.H.S.): U.S.A. models
or "Radiation Emitting Devices Act" (Health and Welfare Canada): Canadian models
It is very important all repairs should be made in accordance with procedures described in this manual to avoid being exposed to excessive microwave radiation.
3. Check for radiation leakage before and after every servicing according to the "procedure for measuring radiation leakage".
4. If the unit cannot be repaired on site, advise the customer not to use until unit be repaired.
5. Any serviceman who learns of any accident pertaining to microwave radiation leakage including the oven operating with open door should immediately notify the appropriate address listed below and Center for Devices and Radiological Health, DHHS.

6. There are special components used in the microwave oven which are important for safety. These parts are marked with a  on the replacement parts list. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent microwave leakage, shock, fire, or other hazards. Do not modify the original design.

PRECAUTIONS TO BE OBSERVED BEFORE AND DURING SERVICING TO AVOID POSSIBLE EXPOSURE TO EXCESSIVE MICROWAVE ENERGY

- (A) Do not operate or allow the oven to be operated with the door open.
- (B) Make the following safety checks on all ovens to be serviced before activating the magnetron or other microwave source, and make repairs as necessary:
 - (1) Interlock operation
 - (2) Proper door closing
 - (3) Seal and sealing surfaces (arcing, wear, and other damage)
 - (4) Damage to or loosening of hinges and latches
 - (5) Evidence of dropping or abuse
- (C) Before turning on microwave power for any service test or inspection within the microwave generating compartments, check the magnetron, waveguide or transmission line, and cavity for proper alignment, integrity and connections.
- (D) Any defective or misadjusted components in the interlock, monitor, door seal, and microwave generation and transmission systems shall be repaired, replaced, or adjusted by procedures described in this manual before the oven is released to the owner.
- (E) A microwave leakage check to verify compliance with the Federal Performance Standard should be performed on each oven prior to release to the owner.

CAUTION

About lead free solder (PbF)

Distinction of PbF PCB: PCBs (manufactured) using lead free solder will have a PbF stamp on the PCB.

Caution: ● Pb free solder has a higher melting point than standard solder; Typically the melting point is 30 - 40°C higher.

Please use a high temperature soldering iron. In case of the soldering iron with temperature control, please set it to 370 ± 10°C.

- Pb free solder will tend to splash when heated too high (about 600°C). Use eyeware protection.

2 Specifications

3 Technical Descriptions

3.1. Description of operating sequence

Variable power cooking control

The coil of power relays are energized intermittently by the digital programmer circuit, when the oven is set to MEDIUM or DEFROST power position. The digital programmer circuit controls the ON-OFF time of each power relay contacts in order to vary the output power of the microwave oven. One complete ON and OFF cycle of the power relay is 44 seconds. The relation between indications on the control panel and the output power of the microwave oven is as shown in **Figure**.

5 Installation Instructions

5.1. Wiring requirements and power source voltage selection

Wiring Requirements

No other appliance should share the circuit with the microwave oven. If it does, the branch circuit fuse may overload and either cause the oven to heat slower than expected or blow the fuse.

1. For Mode NE-12521/NE-12523/NE-1252
The oven must be on a SEPARATE, 20 Amp, 60 Hz-120V GROUNDED CIRCUIT.

NE-12521/ NE-12523/ NE-1252

NEMA #
5-20P

120 V
Grounded
Outlet

NEMA # 5-20R

2. For Model NE-1752/NE-1772/NE-17521/NE-17523/NE-17723
This oven must be on a separate, 60 Hz GROUNDED CIRCUIT-minimum 15 amps.

NE-1752/ NE-1772/ NE-17521/ NE-17523/ NE-17723

NEMA #
6-15P

208 V/230 V
Grounded
Outlet

NEMA # 6-15R

3. For Model NE-21521/NE-21523/NE-2152
This oven must be on a separate, 60 Hz GROUNDED CIRCUIT-minimum 20 amps.

NE-21521/ NE-21523/ NE-2152

NEMA #
6-20P

208 V/230 V
Grounded
Outlet

NEMA # 6-20R

Power Source Voltage Adjustment

For 208V/230V models

The microwave oven automatically detects 208 V and 230 V-240 V. Insert the plug, and if the Digital Display Window goes blank 10 seconds after use, unplug and insert the plug again.

6 Operating Instructions

6.1. Operation procedure

1. Manual heating for single stage

OPERATION	DISPLAY
1. Plug the power supply cord into wall receptacle.	
2. Open the door. Place a water load in the oven and close the door.	
3. Tap POWER LEVEL pad once. (Set to P10 power)	
4. Set desired heating time by tapping number pads 2,0,0 . (Set to 2 minutes)	
5. Tap START pad.	
6. When the times is up, you hear 3 beeps sound.	
7. Open the door and take out the water load. The display goes back to previously setting time.	
8. Close the door. 1 minute later, display will return blank.	

2. Manual heating for 2nd or 3rd stage

OPERATION	DISPLAY
1. Follow step 1 to 4 single stage.	
2. Tap POWER LEVEL pad twice. (Set to P5 power)	
3. Set the desired heating time by tapping number pads 1,0,0 . (Set to 1 minute)	
4. Tap START pad . (1st stage)	
5. When the 1st stage time is up, you hear 1 beep sound. (2nd stage)	
6. When the times is up, you hear 3 beeps sound.	
7. Open the door and take out the water load. The display goes back to previously setting time.	
8. Close the door. 1 minute later, display will return blank.	

NOTE: For a 3rd stage heating cycle, select a further power level and time between steps 3 and 4 above.

3. Memory setting for single stage

OPERATION	DISPLAY
1. Open the door and Leave it open. Touch PROG pad.	
2. Tap shift pad A/B/C once, and press Number pads 1 and 5 . NOE: Previously selected power and time will appear.	
3. Tap POWER LEVEL pad once. (Set to P10 power)	
4. Set the desired heating time by tapping number pads 1 , 0 , 0 . (Set to 1 minute)	
5. Touch PROG pad again.	
6. 3 seconds after, "0" will appear in the display window.	

TO PROGRAM MEMORY AREA B: Follow steps 1 above. Touch the Memory Shift pad **A/B/C** twice and a small **B** will appear beneath the flashing **PROG**.

Touch the memory pad you wish to program, and the previously selected time and power level will appear in the display window.

NOTE: Once the Memory area B has been selected it cannot be changed back to Memory area A. If you do not require Memory area B, cancel it by touching the cancel pad and begin again.

4. Memory setting for 2nd or 3rd stage

OPERATION	DISPLAY
1. Follow steps 1 to 4 for memory setting for single stage.	
2. Tap POWER LEVEL pad twice. (Set to P5 power)	
3. Set the desired heating time by tapping number pads 2 , 0 , 0 . (Set to 2 minutes)	
4. Touch PROG pad again. Heating is displayed by adding single and 2nd stage heating time.	
5. 3 seconds after, "0" will appear in the display window.	

NOTE: For a 3rd stage heating cycle, select a further power level and dial in a time, between steps 3 and 4 above.

5. Memory pad heating

OPERATION	DISPLAY
1. Plug the power supply cord into wall receptacle.	
2. Open the door. Place a water load in the oven and close the door.	
3. Tap shift pad A/B/C once, and press Number pads 1 and 5 .	
4. Tap START pad. (1st stage)	
5. (2nd stage)	
6. When the time is up, you hear 3 beeps sounds.	
7. Open the door and take out the water load.	
8. Close the door. Display will return blank after 1 minute.	

NOTE: When program is locked, heating can be started automatically by tapping memory pad.

6. Programming Double or Treble Quantity Pad

OPERATION	DISPLAY
1. The display window must be blank before programming can begin.	
2. Press the PROG pad.	
3. Press shift pad A/B/C and press Number pads 1 and 5 . The pad number and previously selected time and power will appear.	
4. Press X2 pad. The previously programmed magnification number appear. ex. 1.6 means 1.6 times. NOTE : When you want program for treble quantity heating, press X3 pad.	
5. Set the desired magnification by pressing the appropriate number pad. ex. 1.5 times: press 1 and 5	
6. Press the PROG pad again.	
7. After 3 seconds "0" will appear in the display.	

7. Memory Pad Heating for Double or Treble Quantity Heating

OPERATION	DISPLAY
1. Open the door place a water load in the oven and close the door.	
2. Press the X2 pad. NOTE : When you want treble quantity heating, press X3 pad.	
3. Press the desired memory pad. ex. memory A15 (program No.A-15)	
4. Press START pad .	
5. When the time is up, you will hear 3 beeps sound.	
6. Open the door and remove the water load.	
7. Close the door 1 minute later, display will return blank.	

8. To Read the Cycle Counter

OPERATION	DISPLAY
1. Open the door and leave it open.	
2. While pressing START pad, press Number pad 3 .	
3. While pressing START pad, tap POWER LEVEL pad. Display will now show the total cumulative number of times the oven has been used. ex. 99999→99,999 times.	
4. 3 seconds later, "0" will appear in the display.	

NOTE: Total cumulative number includes programming memory heating and manual heating number of times has been used. Cooking times over 99,999 times will be back 0.

9. To Activate Program Lock

OPERATION	DISPLAY
1. Plug the power supply cord into wall receptacle. Do not open the door.	
2. While pressing START pad, tap PROG pad until the display show "PROG", "P" and "L". (for more than 2 seconds)	
3. Program lock feature now activated.	

10. To Release Program Lock

OPERATION	DISPLAY
1. Plug the power supply cord into wall receptacle. Open the door and leave it open.	
2. While pressing START pad, press and hold PROG pad until the display will show "PROG" and "P". (for more than 2 seconds)	
3. Program lock feature is now deactivated.	

11. To Select Beep Tone Options

OPERATION	DISPLAY
1. Plug the power supply cord into wall receptacles.	
2. Open the door and leave it open.	
3. Press PROG pad.	
4. Press START pad. The display will change from "3bEEP" to "0bEEP" each time when the pad is pressed.	
5. Press PROG pad again.	
6. Close the door. 1 minute later display window will go blank.	

To select length of tone at end of heating cycle there are 3 options.

- 3 beeps (factory setting)
- 60 seconds of short beeps.
- Beep sounds for 5 seconds, and 3 beeps 30 seconds later and 60 seconds later again.

OPERATION	DISPLAY
1. Complete steps 1-4 above. Do not close the door.	
2. Press START pad within 3 seconds after pressing PROG pad at the step 4 above.	
3. Press PROG pad again. 3 seconds later, the display will "0".	
4. Close the door 1 minute later display will go blank.	

7 Test Mode

7.1. Component test procedure

CAUTION

1. High voltage is present at the high voltage terminal of the high voltage transformer during any cook cycle.
2. It is neither necessary nor advisable to attempt measurement of the high voltage.
3. Before touching any oven components, or wiring, always unplug the oven from its power source and discharge the high voltage capacitor.

7.1.1. High voltage transformer

1. Remove connections from the transformer terminals and check continuity.
2. Normal (cold) resistance readings should be as follows:
 Secondary winding Approx. 80Ω - 120Ω
 Filament winding Approx. 0Ω
 Primary winding Approx. 0Ω - 3Ω

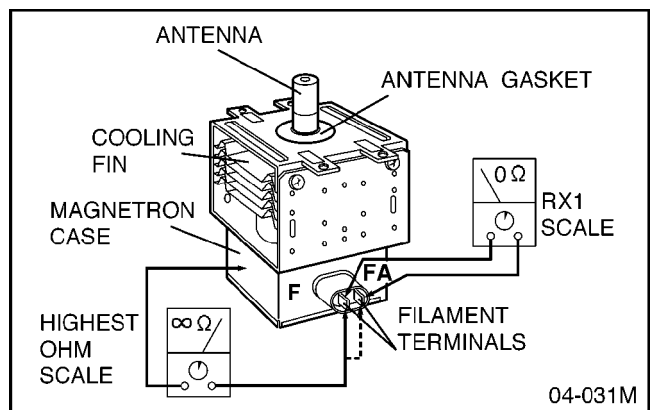

7.1.2. High voltage capacitor

1. Check continuity of capacitor with meter on highest OHM scale.
2. A normal capacitor will show continuity for a short time, and then indicate $9M\Omega$ once the capacitor is charged.
3. A shorted capacitor will show continuous continuity.
4. An open capacitor will show constant $9M\Omega$.
5. Resistance between each terminal and chassis should be infinite.

7.1.3. Magnetron

Continuity checks can only indicate an open filament or a shorted magnetron. To diagnose for an open filament or shorted magnetron.

1. Isolate magnetron from the circuit by disconnecting the leads.
2. A continuity check across magnetron filament terminals should indicate one ohm or less.
3. A continuity check between each filament terminal and magnetron case should read open.

7.1.4. Diode

1. Isolate the diode from the circuit by disconnecting the leads.
2. With the ohmmeter set on the highest resistance scale, measure the resistance across the diode terminals. Reverse the meter leads and again observe the resistance reading. Meter with 6V, 9V or higher voltage batteries should be used to check the front-to-back resistance of the diode, otherwise an infinite resistance may be read in both directions.
A normal diode's resistance will be infinite in one direction and several hundred k Ω in the other direction.

7.1.5. Membrane key board (Membrane switch assembly)

Check continuity between switch terminals, by tapping an appropriate pad on the key board. The contacts assignment of the respective pads on the key board is as shown in digital programmer circuit.

7.1.6. Temp sensor (Thermal protector)

A temp sensor is mounted on exhaust guide. Its purpose is to automatically shut off the oven in case the cavity overheats for any reason.
The thermal protector will operate at 257°F (125°C).
The device is connected to the DPC on touch control models.
When the thermal protector exceeds its temperature it will turn off the power to oven cavity and display will go to reset mode.
The cooking program can be reset after cool-down.
THERMISTOR RESISTANCE VALUE
30K-120K at 10°C-30°C (50°F-86°F)

8 Troubleshooting Guide

8.1. Cautions to be observed when troubleshooting

Unlike many other appliances, the microwave oven is high-voltage, high-current equipment. Though it is free from danger in ordinary use, extreme care should be taken during repair.

CAUTION

Servicemen should remove their watches whenever working close to or replacing the magnetron.

8.1.1. Check the grounding

Do not operate on a 2-wire extension cord. The microwave oven is designed to be used in a completely grounded condition. It is imperative, therefore, to make sure it is properly grounded before beginning repair work.

8.1.2. If the door lock, the door switch, the door seal or the door develops a malfunction, be sure not to operate the oven until complete repairs are made.

If the oven is operated with any of these parts in imperfect condition, hazardous microwave leakage might occur.

WARNING

There is high-voltage present, with high-current capabilities in the circuits of the high voltage winding and filament winding of the high voltage transformer. It is extremely dangerous to work on or near these circuits with oven energized. DO NOT measure the voltage in the high voltage circuit including filament voltage of magnetron.

8.1.3. Warning about the electric charge in the high voltage capacitor

For about 30 seconds after the oven is turned off, an electric charge remains in the high voltage capacitor. When replacing or checking parts, remove the power plug from the outlet, wait 30 seconds and short the terminal of the high voltage capacitor (terminal of lead wire from diode) to chassis ground with an insulated jumper lead wire or an insulated handle screwdriver discharge.

Important Note

1. High voltage above 250 volts exist on following parts during operation.
 - * Magnetron
 - * High Voltage Transformer
 - * High Voltage Diode
 - * High Voltage CapacitorExtra attention and caution should be used during repair or troubleshooting procedures.
2. If the microwave oven is operated with an incorrectly installed door hinge or magnetron, it can cause microwave leakage of over $5\text{mW}/\text{cm}^2$. It is absolutely necessary to check if magnetron and door hinges are correctly and safely installed after repairs or replacement.

WARNING

Never touch any circuitry either your hand insulated tools while oven is energized.

8.1.4. When parts must be replaced, always remove the power plug from the outlet, and discharge the high voltage capacitor.

WARNING

When the 15 Amp. fuse is blown due to the operation of the Interlock Monitor Switch, you must replace the Secondary & Primary Interlock Switches, the Monitor Switch (Short switch), Power Relay and the 15 Amp. 250V. fuse.

8.1.5. Confirm after repair

1. After repair or replacement of parts, make sure that the screws of the oven, etc. are neither loose nor missing. Microwave might leak if screws are not properly tightened.
2. Make sure that all electrical connections are tight before inserting the plug into the wall outlet.

8.1.6. Avoid inserting nails, wire, etc. through holes in unit during operation.

Never insert a wire, nail or any other metal object through the lamp holes on the cavity or any other holes or gaps, because such objects may work as an antenna and cause microwave leakage.

**CAUTION
MICROWAVE RADIATION**

Personnel should not be exposed to the microwave energy which may radiate from the magnetron or other microwave generating device if it is improperly used or connected. All input and output microwave connections, waveguides, flanges, and gaskets must be secure. Never operate the device without a microwave energy absorbing load attached. Never look into an open waveguide or antenna while the device is energized.

CAUTION

High voltage parts may become exposed when outer cabinet is removed.

8.2. Troubleshooting guide

CAUTION

1. Check grounding before checking for trouble.
2. Be careful of the high voltage circuit.
3. Discharge high voltage capacitor.
4. When checking the continuity of the switches or the high voltage transformer, disconnect one lead wire from these parts and then check continuity with the AC plug removed. To do otherwise may result in a false reading or damage to your meter.
When disconnecting a plastic connector from a terminal, you must hold the plastic connector instead of the lead wire and then disconnect it, otherwise lead wire may be open or the connector cannot be removed.
5. Be sure to ground any static electric charge built up in your body, before handling the D.P.C.
6. A 120/208/230V AC s present at the shaded area of the power supply circuit boards (PCB DU and PCB MU).
When troubleshooting, be cautions of possible electrical shock hazard.

First of all operate the microwave oven following the correct operating procedures described on pages 7 of this service manual in order to find the exact cause of any trouble.

NOTE: If the unit shows faulty symptom as shown below, check the parts listed in possible cause column depending on failure indication e.g. F81, F82 in the display.

[TROUBLE 1] Oven does not operate at all or oven does not start cooking.

DISPLAY	CONDITIONS	POSSIBLE CAUSE	TIMING OF FAILURE INDICATION
F33	Open or Short temperature sensor (exhaust)	1. Temperature sensor failure 2. Digital programmer circuit failure 3. Loose connector CN16	It is appeared when failure occurred.
F44		1. Shorted membrane switch 2. Digital programmer circuit failure	It is appeared 2 minutes after failure occurred.
F01 (Wish continuous) beep sounds)	Exhaust temperature exceeds 120°C	1. Burning food in the oven due to over cook	It is appeared when exhaust temperature exceeds above 120°C.
F05	Memory failure	1. Digital programmer circuit failure	
F81	No voltage supply to high voltage transformer (upper)	1. Relay failure (RY-2, RY-3, or RY-4) 2. 15A fuse open 3. Digital programmer circuit failure	It is appeared when failure occurred.
F82	No voltage supply to high voltage transformer (lower)	1. Relay failure (RY-5, RY-6, or RY-7) 2. 15A fuse open 3. Digital programmer circuit failure	It is appeared when failure occurred.
F86	Shorted contacts of Power Relay	1. Relay failure (RY-2, RY-3, or RY-4) 2. Digital programmer circuit failure	It is appeared when failure occurred.
F87	Shorted contacts of Power Relay	1. Relay failure (RY-5, RY-6, or RY-7) 2. Digital programmer circuit failure	It is appeared when failure occurred.

9 Disassembly and Assembly Instructions

CAUTION

Servicemen should remove their watches whenever working close to or replacing the magnetron.

9.1. Replacement of magnetrons (Upper and Lower)

Upper magnetron

1. Discharge electric charge remaining on the high voltage capacitors.
2. Remove the entire rear panel by removing screws as shown.
3. Disconnect all lead wires from magnetron and thermal cutout.
4. Remove the 4 screws holding magnetron.
5. Remove 2 screws holding thermal cutout.
6. Remove the mounting bracket from magnetron and install it on the new magnetron.

Lower magnetron

1. Discharge electric charge remaining on the high voltage capacitors.
2. Remove the entire rear panel by removing screws as shown.
3. Carefully place the unit on its left side (H. V. Capacitor side).
4. Remove the cover by removing 2 screws.
5. Remove the 4 screws holding magnetron by inserting screwdriver through the 4 openings on bottom plate.
6. Remove 2 screws holding thermal cutout.
7. Remove the mounting bracket from magnetron and install it on the new magnetron.

NOTE: To prevent microwave leakage, tighten mounting screws properly making sure there is no gap between the waveguide and the magnetron.

CAUTION

When connecting 2 filament lead wires to the magnetron terminals, be sure to connect the lead wires in the correct position. The lead wire with blue connector should be connected to "FA terminal" and white or pink one should be connected to "F terminal".

Removal of Positive Lock connector

The positive lock connector is a specially designed loose free connector and you will find this connector in many lead wire connections. To remove this connector, pull the lead wire by pressing an extruded lever in the center of receptacle terminal as shown.

9.2. Replacement of power relay circuit board (PCB MU)

NOTE: Be sure to ground any static electric charge built up on your body, before handling the power relay P. C. B..

1. Disconnect all lead wires from power relay circuit board.
2. Remove the power relay P. C. B. together with its mounting bracket by first removing the 1 bracket holding screw.
3. The power supply P. C. B. can be separated from mounting bracket by removing the 2 screws.

9.3. Replacement of digital programmer circuit board (PCB AU)

1. Disconnect 2 flat cables from PCB A(U).
2. Disconnect all of the connector from PCB A(U).
3. Remove 2 screws holding PCB A(U) to detach it from its mounting bracket.

NOTE1: Please use care in handling the D. P. C. board to avoid damage.

NOTE2: After replacing the PCB AU with new one, set the power voltage (208V or 230V) up as below procedure.

1. Open the door and leave it open.
2. While pressing START pad, close the door and open it again.
3. Press SHIFT [A/B/C] key within 10 second after opening the door.
4. Press X2 or X3 key to set the voltage up.
 - When X2 key is selected, [208] will appear, and [230] appears when X3 key is pressed.
5. Press PROG pad to set the voltage up.
 - After 3 seconds, the power voltage selected will disappear and 0 appears in the display window.
 - It has been just completed.

9.4. Replacement of PCB BU (for display tube) and membrane switch

1. Remove the grounding screw for membrane switch.
2. Disconnect 2 flat cables of membrane switch and PCB B(U) from PCB A(U).
3. Remove 3 screws holding control panel and detach it from the unit.
4. Remove 2 screws to detach PCB B(U) from the control panel.
5. Detach escutcheon A from escutcheon base by releasing hooks, and also remove membrane switch from it.

9.5. Replacement of upper antenna

CAUTION

The upper and lower rotating antennas are different type and are not interchangeable each other. Care should be taken not to reverse the top and bottom antennas.

1. Remove ceiling plate by gently moving the left and right tabs inward while pulling the plate down and outward.
2. Using a small flat screwdriver or the like, remove two plastic clips located on the antenna ring. Next turn the antenna ring approx. 1/8 turn clockwise to unhook the tabs and pull off.

9.6. Replacement of floor shelf and lower antenna

1. To remove the floor shelf, insert a screwdriver through the small opening on the left side of the oven cavity and carefully lift the floor shelf.
2. For removal of lower antenna, use the same procedure as upper antenna.

9.7. Replacement of temperature sensor (Thermal protector)

1. Cut 2 lead wires at the top of sensor terminals.
2. Remove 2 screws holding temp sensor and replace with new one.
3. Solder the lead wires securely to the sensor terminals.

9.8. Disassembly of door assembly

1. Remove each 2 bolts holding upper and lower hinges.
2. Open the door and while pulling the door outward, work upper and lower hinges out through the holes of the front surface of oven.
3. Remove door C (check cover) from door E by carefully pulling outward starting from the upper right hand corner.
4. Remove 2 screws holding door handle and separate door A from door E by carefully freeing catch hooks.
5. Remove door key, door key lever, door key spring and handle pins from door E.
6. Assemble the door by taking the above steps in a reverse order.

Replacement

1. When mounting the door to the oven be sure to adjust the door parallel to the bottom line of the oven face plate by moving the upper hinge and lower hinge in the direction necessary for proper alignment.
2. Adjust so that the door has no play between the inner door surface and oven front surface. If the door assembly is not mounted properly, microwave may leak from the clearance between the door and the oven.

NOTE: Please refer to [10.1. Measurements and adjustments].

9.9. Replacement of PCB FU (SD card)

1. Disconnect CN22 connector from PCB F(U).
2. Remove 3 screws holding SD card unit.
3. Remove 2 screws holding PCB bracket.
4. Remove 2 screws holding PCB F(U).

9.10. Replacement of PCB HU (LED light)

1. Disconnect CN17 connector from PCB H(U).
2. Remove 1 screw holding PCB bracket.
3. Remove 2 screws holding PCB H(U).

10 Measurements and Adjustments

10.1. Measurements and adjustments

WARNING

For continued protection against excessive radiation emission, replace only with identical replacement parts. When the 15 Amp. fuse is blown due to the operation of the Interlock Monitor Switch, you must replace.

- (A) TYPE V-16G-3C26 (ANE61424L0AG) for Secondary Interlock SW. (LATCH SW A) and TYPE V-15G-3C26 (ANE6142-F60) for Primary Interlock SW. (LATCH SW. B)
- (B) TYPE V-16G-2C25 (ANE61784L0AG) for Monitor SW. (SHORT SW.).
- (C) TYPE G5G-1A for Power Relay. (RY2-7)
- (D) TYPE TLC RATED 250V, 15A fuse, (A62303A60AP).

10.1.1. Installation of Safety switch A, Safety switch B and Short switch

- When mounting Safety switch A, Safety switch B and short switch to door hook assembly, mount the Safety switch A, Safety switch B and the short switch to the door hook assembly as shown. (in Figure).

NOTE: No specific adjustment during installation of Safety switch A, Safety switch B and short switch to the door hook is necessary.

- When mounting the door hook assembly to the oven assembly, adjust the door hook assembly by moving it in the direction of arrow in (Figure) so that the oven door will not have any play in it. Check for play in the door by pulling the door assembly. Make sure that the latch keys move smoothly after adjustment it completed. Completely tighten the screws holding the door hook assembly to the oven assembly.
- Reconnect the short switch, safety switches A & B and check the continuity of the monitor circuit and all latch switches again.

10.1.2. Measurement of microwave output

The power output of the magnetron can be determined by performing IEC standard test procedures. However, due to the complexity of IEC test procedures, it is recommended to test the magnetron using the simple method outlined below.

Necessary Equipment:

- *1 liter beaker
- *Glass thermometer (Celsius scale)
- *Wrist watch or stopwatch

NOTE: Check the line voltage under load. Low voltage will lower the magnetron output. Take the temperature readings and heating time as accurately as possible.

- Fill the beaker with exactly one liter of tap water. Stir the water using the thermometer and record the beaker's temperature (recorded as T1)
- Place the beaker on the center of ceramic shelf.
- Set the oven to High power and heat it for exactly one minute.
- Stir the water again and read the temperature of the bea-

ker (recorded as T2). The normal temperature rise (T2-T1) at High power output for each model is as shown in table.

TABLE (1 ℓ -1 min. test)

RATED OUTPUT	TEMPERATURE RISE
1200 W (IEC705)	Min. 10.6°C
1700 W (IEC705)	Min. 15.3°C
2100 W (IEC705)	Min. 18.1°C

10.2. Procedure for measuring microwave energy leakage

WARNING

Check for radiation leakage after every servicing. Should the leakage be more than 2 mW/cm² (1 mW/cm² for Canada) inform PCMNA, PSC, or PCI immediately. After repairing or replacing any radiation safety device, keep a written record for future reference, as required by D.H.H.S. and Health and Welfare Canada regulation. This requirement must be strictly observed. In addition, the leakage reading must be recorded on the service repair ticket while in the customer's home.

NOTE: The U. S. Government standard is 5 mW/cm² while in the customer's home. 2 mW/cm² stated here is our own voluntary standard. (1 mW/cm² for Canada)

10.2.1. Equipment

Note before measuring.

1. Do not exceed meter full scale deflection. Leakage monitor should initially be set to the highest scale.
2. To prevent false readings the test probe should be held by the grip portion of the handle only and moved along the shaded area shown in Figure no faster than 1 inch/sec (2.5 cm/sec).
3. Leakage with the outer panel removed - less than 5 mW/cm².
4. Leakage for a fully assembled oven with door normally closed - less than 2 mW/cm² (1 mW/cm² for Canada).
5. Leakage for a fully assembled oven [Before the latch switch (primary) is interrupted] while pulling the door - less than 2 mW/cm².
6. Pour 275± 15cc (9ozs ± 1/2oz) of 20 ± 5°C (68± 9°F) water in a beaker which has graduations to 600cc, and place in the center of the oven.
7. Set the radiation monitor to 2450MHz and use it following the manufacturer's recommended test procedure to assure correct results.
8. When measuring the leakage, always use the 2 inch (5 cm) spacer supplied with the probe.
9. Tap the start pad or set the timer and with the magnetron oscillating, measure the leakage by holding the probe perpendicular to the surface being measured.
10. Measurement with the outer panel removed.

Whenever you replace the magnetron, measure for radiation leakage before the outer panel is installed and after all necessary components are replaced or adjusted. Special care should be taken when measuring around the magnetron.

WARNING

Avoid contacting any high voltage parts.

11. Measurements with a fully assembled oven.
After all components, including outer panel are fully assembled, measure for radiation leakage around the door periphery, the door viewing window, the exhaust opening and air inlet openings.

10.2.2. Record keeping and notification after measurement

1. After any adjustment or repair to a microwave oven, a leakage reading must be taken. Record this leakage reading on the repair ticket even if it is zero.
A copy of this repair ticket and the microwave leakage reading should be kept by repair facility.
2. Should the radiation leakage be more than 2 mW/cm² (1 mW/cm² for Canada) after determining that all parts are in good condition, functioning properly, and genuine replacement parts as listed in this manual have been used, immediately notify PCMNA, PSC, or PCI.

10.2.3. At least once a year, have the radiation monitor checked for calibration by its manufacturer.

WARNING

AVOID CONTACTING ANY HIGH VOLTAGE PARTS.
