GENERAL INSTALLATION DATA

CAUTION

This equipment is designed and sold for commercial use only by personnel trained and experienced in its operation and is not sold for consumer use in and around the home nor for use directly by the general public in food service locations. For equipment to be used by the general public, please contact the factory.

THOROUGHLY INSPECT YOUR MACHINE ON ARRIVAL

We do everything in our power to insure delivery of your machine in perfect condition. However there are instances in which the unit may be damaged in transit. In the event your unit is damaged in transit, have the transportation company make the necessary notations on your freight bill or delivery receipt. Immediately report this damage to the dealer from whom you purchased the machine. The dealer will advise proper handling instructions. If damage is not discovered until after delivery has been made, notify the transportation company immediately. However, in each instance, request an inspection report to cover whatever damage has occurred in transit.

INSTALLATION

Each machine has been properly wired and inspected at the Factory for operation on the Voltage and type of Current specified on the nameplate.

CAUTION

Do not connect to any other type of current or the machine will be seriously damaged.

We strongly recommend installation by a Licensed Electrician. The guarantee of this machine as covered by the Warranty Card does not apply if an improper installation has been made.

120 VOLT MACHINES

Machines with nameplate stamped 120V, are equipped for operation on 120 Volt, 2 wire, 60 Cycle AC single phase service and must be connected to a separate 15 Amp circuit with a 3 wire grounded, polarized receptacle.

GENERAL OPERATING INSTRUCTIONS

CAUTION

The motor air intake and exhaust holes located on top of the machine must be clear of any obstruction.

DO NOT COVER THESE AIR VENT HOLES as serious motor damage will result.

Check to insure the installation of the Corn Drawer before the Popping cycle is started.

With all switches in the "OFF" position, proceed in the following sequence to Pop Corn:

- 1.)** Turn "ON" the Corn Warming switch. This switch controls the Bottom heating element, the Top heating lamp and the Sign display lamps of the Sign Lighted models.
- 2.)** Turn "ON" the Kettle switch. This switch controls the Kettle heating element. The Red pilot light is provided to indicate when the Kettle switch is "ON". Allow six to seven minutes to pre-heat the Kettle. The Kettle heating element is thermostatically controlled. Thermostat adjustments should not be necessary as it has been preset at the factory for the correct popping temperature.
- 3.)** Turn "ON" the Agitator Motor switch. The Motor should always be running when there is corn in the Kettle. This will prevent scorching or burning of corn.

GENERAL OPERATING INSTRUCTIONS - continued

4.) A Corn and Seasoning measuring cup is supplied with your machine. Pour a level measuring cup of Oil (2 ounces) in Kettle. Add a leveled measuring cup of raw corn (6 ounces) and 1/2 Teaspoon of Popcorn Salt. Vary the amount of salt and oil to suit taste. If desired, salt may be added adfter the Corn is popped.

5.) When the Corn stops popping, dump the Kettle immediately by turning the handle clockwise approximately 90 degrees to release latch. Recharge as quickly as possible. Screen out unpopped kernels over the perforated section of the Corn pan.

6.) Turn the Kettle "OFF" when the desired amount of popping is completed.

WARNING

Do not leave the Kettle and Motor switch "ON" when the machine is not in use. Do not immerse the Kettle in water or allow water to come in contact with the Heating element.

Popping Corn in dry kettle is not recommended.

Do not connect machine to Direct Current, as this unit is designed to operate on Alternating Current only!

MAINTENANCE

Keep The Popping Unit Clean

After each popping period, wipe clean the Kettle inside and out while it is warm. This is important because if seasoning and salt are not thoroughly removed, a carbonized material will form. This condition not only lowers popping efficiency and causes excessive smoking, but could damage the unit. For retaining the high lustre on the stainless steel Kettle shell and lids, use a non-abrasive standard stainless steel cleaner when the Kettle is cold. Use a damp cloth and a warm mild soap solution to clean the glass and clear plastic surfaces.

To remove Kettle:

Turn "OFF" the Kettle motor switches. Disconnect the Twist Lock Cap at the end of the Kettle conduit, turn Kettle handle clockwise 90 degrees to unlatch the Kettle, hold the Kettle and pull out the hinge pin. The Kettle can now be removed from unit. Use asbestos gloves to remove a hot Kettle. **DO NOT PLACE THE KETTLE IN WATER**, as this will damage the electrical assembly.

To change Sign Display Lamps (on Sign Lighted Models):

Turn "OFF" all switches. Unscrew 2 sheet metal screws on the Rear side top (holding switch and pilot light panel) and 4 screws on the top. Cautiously take the top off. Cahnge bulb(s) and reassemble the top onto the frame. Tighten all six screws securely. **WARNING!** Use only inside Frosted Bulb. Wattage per label on the surface of the Top Liner. By Authorized Personnel Only.

MAINTENANCE and REPAIRS

Contact the Factory or one of its representatives or a local Service Company for Service or Maintenance required.
